

# AVIATION

---

## **What are the risks of not using a specialized aviation logistics provider?**

Aviation shipments involve tight timelines, sensitive components, and strict handling requirements. Using a general freight provider increases the risk of delays, improper handling, asset damage, and extended aircraft downtime—each of which can carry significant operational and financial consequences.

---

## **What is Aircraft-on-Ground (AOG) transportation?**

AOG transportation supports situations where an aircraft is grounded due to mechanical issues or missing components. These shipments are time-critical and require immediate coordination to restore operations as quickly as possible.

---

## **Can McCollister's support time-critical aviation shipments?**

Yes. McCollister's provides 24/7/365 pickup, delivery, and support for time-sensitive aviation moves, including AOG requests and scheduled critical shipments.

---

## **How does McCollister's ensure the safety of aviation components?**

Our aviation shipments are handled by trained drivers using specialized equipment and secure loading practices. Shipments are GPS-tracked to provide visibility and accountability throughout transit.

---

## **How do I get started with McCollister's for my aviation project?**

Simply contact our team to speak with an aviation logistics expert. We'll assess your requirements and coordinate a transportation solution built around your timeline, asset, and operational needs.
