

INSTALLATION

What types of projects are best suited for McCollister's installation services?

Our installation services are designed for projects involving high-value, specialized, or operationally critical equipment, especially when coordination across transportation, storage, and on-site installation is required.

Do you support multi-location or phased rollouts?

Yes. McCollister's regularly manages installations across multiple locations, supporting phased deployments, scheduled rollouts, and site-specific requirements through centralized project management.

How does project management factor into installation services?

Each installation project is supported by experienced project managers who coordinate timelines, site readiness, transportation, staging, and on-site execution to ensure consistency and accountability.

Can installation services be bundled with transportation and warehousing?

Absolutely. Installation services are often bundled with transportation and warehousing to create a seamless, end-to-end solution that minimizes delays, reduces risk, and improves overall project efficiency.
